Professional Summary

Fullstack Developer with over 6 years of experience engineering high-throughput microservices, distributed integrations, and cloud-native architectures for enterprise clients like Samsung and TotalExpress. Proven track record of optimizing developer experience (DX) and streamlining technical onboarding to accelerate engineering time-to-production by 40%. Expert in designing reliable, event-driven backend systems using Node.js, Java, and Kafka, paired with secure infrastructure deployment using Kubernetes and GitOps.

Experience

WEX 📅 September 2025 – Present (8 months)
Software Development Engineer 📍 Remote, USA

- **Onboarding & Integration:** Accelerated engineering time-to-production by **40%** by streamlining technical onboarding across authentication, API management, and automated deployment pipelines.
- **Infrastructure Migrations:** Spearheaded the seamless migration of core enterprise API management platforms and developer documentation hubs, executing transitions ahead of schedule with zero downtime for active consumer workflows.
- **R&D & Full-Stack Delivery:** Evaluated emerging technologies and local AI inference tools through rapid prototyping, successfully integrating vetted features into scalable production full-stack services.

Automining 📅 July 2023 – August 2025 (2 years)
Backend Developer 📍 Remote, Brazil

- **Distributed Architecture:** Designed and optimized event-driven microservices using NestJS (Node.js) and Spring Boot (Java), utilizing Apache Kafka and Redis to handle high-throughput telemetry data processing.
- **CI/CD & GitOps Automation:** Architected enterprise-grade deployment strategies using Kubernetes (EKS/AKS), Docker, and GitHub Actions, reducing manual release overhead and standardizing environmental drift controls.
- **Quality Assurance:** Established strict TDD patterns utilizing Jest and JUnit, increasing test coverage thresholds across core ledger systems to guarantee transactional accuracy.

Emme.ly 📅 February 2023 – July 2023 (6 months)
Backend Developer 📍 Remote, USA

- **API & Payment Integrations:** Developed high-availability B2C backend services with NestJS and Strapi, seamlessly integrating Stripe for secure billing workflows and Google APIs for real-time scheduling.
- **Message Orchestration:** Implemented asynchronous task processing architectures using RabbitMQ to decouple heavy processing tasks, improving core application responsiveness under peak traffic.

Semantix 📅 February 2021 – September 2022 (1 year 8 months)
Backend Developer 📍 Remote, Brazil

- **Enterprise Integrations:** Acted as technical reference for high-volume synchronization engines linking major e-commerce marketplaces to enterprise backends for clients like Samsung and TotalExpress.
- **Developer Experience (DX):** Refactored core internal tooling and boilerplate repositories with Express.js and MongoDB, resulting in a measurable increase in sprint delivery agility across cross-functional engineering teams.

Projects

Tocke — *Java Spring Boot, React, PostgreSQL* 📅 February 2025

- Engineered a full-stack B2C ecosystem connecting tabletop gaming hubs with local communities, featuring a live inventory/sales module and a real-time player peer-to-peer bazaar trading system.

Education

UniAmérica University Center 📅 October 2022 – December 2024
Associate Degree in Systems Analysis and Development 📍 Online

Skills

- **Languages:** **Native:** Portuguese — **Advanced:** English — **Intermediate:** Spanish
- **Core Engineering:** Node.js (NestJS, Express), Java (Spring Boot), Python, JavaScript, SQL (PostgreSQL, SQL Server), NoSQL (MongoDB)
- **DevOps & Infrastructure:** AWS (EKS, IAM, EC2, S3), Kubernetes, Docker, Terraform (IaC), GitOps, CI/CD Pipelines (GitHub Actions)
- **Messaging & Middleware:** Apache Kafka, RabbitMQ, Redis, API Gateways, OAuth2, Auth0, Observability (Grafana, Prometheus, ELK)
